+ Add another card
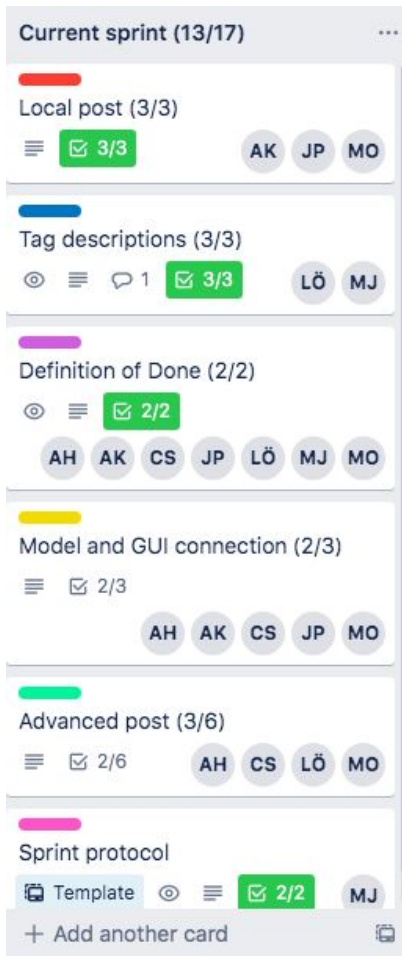

1. Local post

Description
As a user, I want to be able to create local post which persist during runtime, to see the result of my post creation.

Tasks
- Can I add a title?
- Can I add a description?
- Does the post persist during runtime?

2. Tag descriptions

Description
As a user, I want to be able to view posts.

Tasks
- Does every tag have a title?
- Does every tag have a description?
- Is the file formatted in a format which is simpla to parse?

Comment: We decided to not have descriptions for tags, since there is a description for each post where the user can specify the items.

3. Definition of Done

Description
-

Tasks
- Does the DoD make sure the user story is pushed to master, the project compiles, it follows the UML diagram, is assigned "done" in Trello, and pass the necessary tests?
- Is the DoD pushed to github?

4. Model and GUI connection

Description
As a user, I want the GUI to enable me to create a post under "posts", and have my new post visible under "board", to have a functioning client application.

Tasks
- Can I switch to a view where i can add a post?
- Can I switch to a bord view where posts are visible?

Tasks we decided to not include in this sprint:
- There's no "dead" elements in the GUI, no dummy buttons

5. Advanced post

Description
As a user, I want to be able to include more information about myself and the item I'm sharing.

Tasks
- Include my number so I am reachable
- Include my address (and apartment number)
- Specify time when I am available - not finished

Tasks we decided to not include in this sprint:
- Ability to indicate when I am available
- Tag the post as Donation post or Seeking post
- Include an image of the food

6. Sprint protocol

Description
As a group we want to be able to document and follow our progress per sprint.

Tasks
- Create a new directory for Sprint protocol in git
- Add protocol for sprint 1
